

Competent solutions as rail experts since 1997.

WAGEMANN: working for the railways worldwide since 1997.

Testimonial

The water supply units and waste water disposal systems we design and manufacture (mobile and fixed), interior cleaning systems (IRA), interior cleaning platforms and utility cabinets have been tried and tested for nearly 20 years. It all started with Deutsche Bahn: Now, our systems are used by customers all over the world.

Our customers vary from national and international transportation organizations, train manufacturers, OEMs, operators and proprietors of railway infrastructures, system vendor companies and operators of depots.

WAGEMANN
Systems

Since 1997 the name Wagemann has been a byword for the highest professionalism with regard to fulfilment of supply and disposal requirements with railway organizations all over the world.

No matter whether fixed or mobile, whether it's a question of a utility cabinet, a boarding aid or a system solution: All our machinery is approved by the German Railways Authority (EBA) and the relevant public authorities.

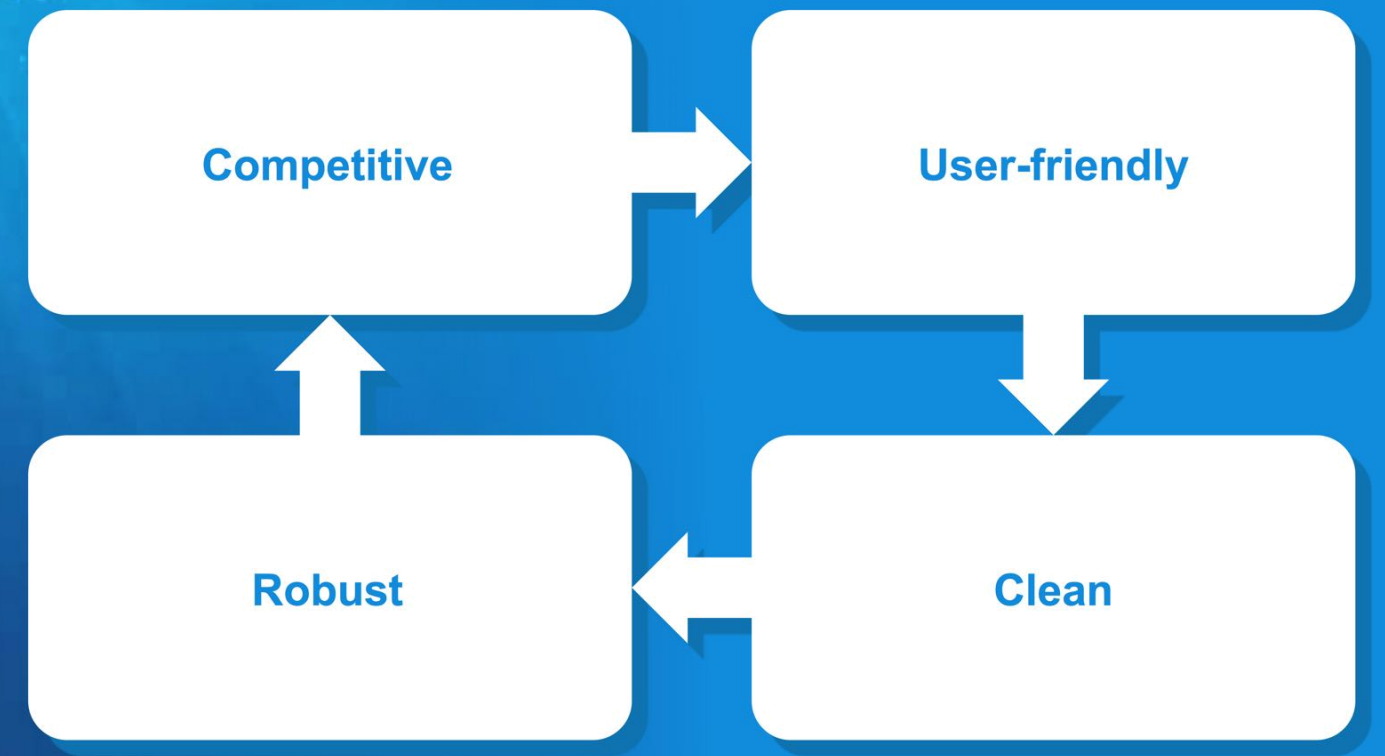

Thus Wagemann provides the perfect combination of technological expertise and many years of consulting experience for international, private and public transportation organizations, system vendor companies, train manufacturers and operators of train infrastructures and depots.

One of our particular strengths at Wagemann is to offer the greatest possible flexibility with regard to planning and realization, because we take into account the situational requirements of the particular construction and location of railway depots and service points.

Thus we develop cost-conscious, needs-oriented solutions to meet the specific requirements of our customers for supply and disposal of trains. We provide end-to-end service to the highest quality standards – as railway experts since 1997.

At Wagemann, we not only focus on components, but also on the complete solution for the railway customer.

Our principles of development, planning and construction of supply and disposal machinery, both mobile and fixed.

Competitive

- DB Netze - series- / user approval
- Approved by German Railways Authority EBA
- A wide range of options and additions, thanks to a modular system
- Minimal heating output thanks to increased cabinet insulation
- Remote monitoring.
- Compact design on an optimum base
- Fast operational readiness of the machinery as external components are not required
- No cost-intensive extra work necessary

Robust

- Developed for the requirements of railway operations
- Stable locking system designed specifically for the area of application
- Modular system with all necessary functionality
- Enhanced operational safety thanks to addition of redundant pumps or choppers

User-friendly

- Automatic, easy-to-operate locking system
- Processes of supply and disposal only work separately and one after another
- Optional work area lighting
- Intuitive operation of the system
- Clear identification markings
- Components arranged for easy servicing

Clean

- Automatic rinsing of the potable water system meets hygiene requirements prior to each time the system is used or at specified time intervals
- Strict separation of waste water disposal and potable water supply
- Rinsing of the train tank compliant with norm DIN 1717
- Rinsing of pump and waste water pipe after each use
